

MUHAMMAD ARGYA VITYASY

Jakarta, Indonesia | vityasyyy@gmail.com | (+62) 811 2950 70 | [LinkedIn](#) | [GitHub](#)

EDUCATION

Universitas Gadjah Mada

Yogyakarta, Indonesia

Bachelor of Computer Science | Cumulative GPA: 3.85/4.00 (113/144 credits)

August 2023 – Present

- **Relevant Coursework:** Algorithms and Data Structures, Scalable Software Engineering, Software Engineering Methods, Cloud Computing, Computer Networks, Cyber Security

WORK EXPERIENCE

Software Engineer Intern | GDP Labs

February 2026 – June 2026

Enterprise AI automation platform building multi-agent LLM systems for HR, payroll, and project management workflows.

- Built LLM-powered agents in a multi-agent system automating enterprise HR and project management workflows, reducing manual intervention across 3+ workflow types.
- Designed a compliance monitoring pipeline that auto-generates audit summaries, eliminating manual report tracking across organizational workflows.
- Contributed to a pluggable IAM SDK with atomic multi-provider transactions, preventing partial-state failures across authentication flows.
- Authored Playwright end-to-end test suites covering multi-agent tool-use correctness in production-mirrored environments.

Backend Engineer | PT Satria Duta Raya

October 2025 – January 2026

B2B procurement platform enabling businesses to discover ranked products through an asynchronous recommendation pipeline.

- Architected a production Go/Gin backend across 6 strict domain boundaries (auth, buyer, supplier, product, order, notifications) serving a B2B procurement platform.
- Built an event-driven product ranking pipeline on Redis Streams with idempotent consumers and Dead Letter Queues, decoupling heavy computation from request paths and containing failure blast radius.
- Shipped full-stack observability using Prometheus and Grafana, covering request throughput, latency, background worker health, and resource utilization.

Backend Engineer | Jogja International Model United Nation 2025

April 2025 – October 2025

Annual academic simulation of the United Nations bringing together students worldwide for diplomatic debates.

- Processed 10,000+ API requests and 500+ concurrent registrations with 99.9% uptime using Go, PostgreSQL, AWS S3, and Docker.
- Cut manual staff workload by 40% by building a role-based admin dashboard that automated user verification and approval workflows for 150+ staff actions.

Backend Engineer | Organisasi Mahasiswa Ahli Teknologi Informasi UGM

March 2024 – July 2025

Student-led IT organization comprising 8 specialized divisions and 80+ members managing real-world software projects.

- Built a reusable Go/Node.js/Docker backend framework deployed across 4 client projects, cutting development and deployment time by 60%.
- Handled 3,000+ user registrations and high-concurrency workloads with 99.9% uptime across all deployed projects.
- Mentored 15 engineers weekly on distributed systems, CI/CD, Kubernetes, and secure authentication, driving technical growth across the team.

PROJECTS

National University Entrance Exam Mock Platform | [GitHub](#)

- Served 200+ concurrent users at sub-50ms latency across a 4-service Go/Docker microservices architecture.
- Processed 150+ timed exam sessions from a 1,000-question bank with <5% error rate via token-based auth and a custom exam engine exposing 20+ REST APIs.
- Designed a migration plan to Kafka-based async processing and Kubernetes orchestration for future scalability.

ADDITIONAL SKILLS & INTERESTS

Languages & Frameworks: Go, Python, TypeScript, Gin-Gonic, Express, Pydantic

Data & Infrastructure: PostgreSQL, MongoDB, Redis, Kafka, Docker, Terraform, Ansible, AWS S3, MinIO

Observability & Testing: Prometheus, Grafana, Playwright

Interests: LLM-powered automation, distributed systems, cloud computing, DevSecOps, system design & scalability
